# ADITYA GIRISH ANAND

Boston, MA | +1 (617) 602-6126 | girishanand.a@northeastern.edu | LinkedIn | GitHub | Portfolio

## EDUCATION

**Northeastern University** — Boston, MA
MS in Engineering Management (**GPA:** 3.6/4.0) — Jan 2025 - Dec 2026

**Manipal Institute of Technology** — Manipal, India
B.Tech in Computer Science & Engineering | Minor in Digital Marketing — Oct 2020 – Aug 2024

## SKILLS

**Data & Analysis:** MS Excel, Google Analytics, VLOOKUP, Tableau, KPI Reporting, Data Cleaning, Data Standardization, Statistical Analysis
**Software Language:** Python, Java, JavaScript, HTML, MySQL, C, Embedded C, Jupyter Notebook, SmartPLS3
**Supply Chain:** Inventory Management, Demand Planning, S&OP, SLA Management, Vendor Management
**Process Improvement:** Lean Six Sigma Methodology, Kaizen, Pareto Analysis, Root Cause Analysis, Misclassification Analysis, DMAIC

## PROFESSIONAL EXPERIENCE

**SortMyScene** — Jan 2023 – Jan 2024
***Product & Operations Analyst*** — Mumbai, India

- Cleaned and standardized raw operational data using MS Excel across interconnected datasets by resolving data integrity issues, preventing an estimated 10% error rate in revenue and inventory reporting
- Built inventory position dashboards and SLA compliance trackers using Pivot Tables and Conditional Formatting, identifying 12% of events at stockout risk and a 30% SLA gap between top and bottom fulfilment channel
- Conducted Pareto analysis on fulfilment records and supplier incidents to isolate the top 20% of issue categories, enabling targeted corrective action that focused 70% of improvement efforts on the highest-impact failures
- Developed an 8 KPI executive dashboard in Tableau, reducing cross-functional reporting time by 85% and enabling weekly S&OP reviews

**Helixer Healthcare** — Feb 2024 – May 2024
***AI Testing Engineer Intern*** — Hyderabad, India

- Designed end-to-end process model for an AI-powered TB detection system with 2 quality gates and 10 failure modes, reducing undetected diagnostic errors by 15% through systematic quality control at each processing stage
- Benchmarked ML model performance across 6 KPIs including sensitivity and specificity, setting alert triggers that maintained diagnostic reliability at 90%+ accuracy
- Automated the model testing pipeline using Python, reducing 5 hours of manual testing per iteration with a 10-minute script that calculated all KPIs and flagged drops automatically
- Collaborated with ML engineers, data scientists, and healthcare professionals to validate the TB detection system, documenting test results to support regulatory review in a healthcare environment

**Mercedes-Benz Research & Development** — Jun 2023 – Aug 2023
***AUTOSAR & Data Security Intern*** — Bangalore, India

- Studied and documented the AUTOSAR software architecture or vehicle ECU systems, building technical knowledge across a global R&D team to support standardized development processes
- Tested ECU communication using Vector CANoe simulation and fault injection, validating secure data transfer between control units before physical production to reduce risk of defects reaching the assembly line

## PROJECTS

**Amazon Performance Evaluation System – Lean Concepts and Applications** — Jan 2026 – Apr 2026
*MS Visio, Lean Principles, Value Stream Mapping, Process Improvement* — *Northeastern University*

- Reverse engineered Amazon's evaluation process as a Value Stream Map by analyzing employee feedback data from public sources, identifying handoffs, cycle times and decision points across 3 phases
- Applied Lean Methodologies to identify 4 bottlenecks in the system, proposing standardized improvements to reduce cycle time by 30% and improve fairness in promotion & layoffs decisions

**Event Management Mobile Application – Engineering Project Management** — Jan 2025 – Apr 2025
*MS Project, Agile/Scrum, Gantt Chart, Risk Management, CPM, RACI, Budgeting* — *Northeastern University*

- Planned a $239K event management app across 5 phases with an 11-member team, building the WBS, RACI matrix, resource allocation, and Gantt Chart in MS Project to track 195 tasks over a 224-day schedule
- Flagged integration delays as the top project risk before development, breaking large tasks into smaller deliverables to prevent an estimated 3-week schedule slip and saving $12K in additional labor costs
