ADITYA GIRISH ANAND

Boston, MA | +1 (617) 602-6126 | girishanand.a@northeastern.edu | LinkedIn | GitHub

EDUCATION

Northeastern University, Boston, MA — Expected May 2027

MS in Engineering Management | **GPA:** 3.6/4.0 | **Courses:** Project Management, Operations Research, Lean Concepts & Applications, Engineering Probability & Statistics, Computation & Visualization

Manipal Institute of Technology, India — Oct 2020 – Aug 2024

BTech in Computer Science & Engineering | **GPA:** 3.3/4.0

SKILLS & CERTIFICATIONS

Process Improvement: Value Stream Mapping, DMAIC, Root Cause Analysis, Kaizen, Lean Six Sigma, KPI Tracking, Process Standardization
Data & Analysis: Statistical Analysis, Regression/Hypothesis Testing, Sensitivity Analysis, Tableau, Power BI, Google Analytics, Excel (Macros)
Software: MS Project, Jira, Asana, Smartsheet, SharePoint, Python (Pandas, NumPy), R, Jupyter Notebook
Certifications: Google Project Management Professional (In Progress) | Lean Six Sigma White Belt | Analytics in Digital Marketing

PROFESSIONAL EXPERIENCE

Bespoke Web Pvt. Ltd. (SortMyScene) — Jan 2023 – Jan 2024
Product & Operations Analyst — Mumbai, India

- Drove **$700K** GMV and **$150K** revenue by leading cross-functional alignment across sales, ops, and **280+** partner firms to design and deploy a scalable, standardized pricing strategy
- Mapped the **customer segmentation value stream** to identify process bottlenecks, reducing cycle time from **2 days to 3 hours** via Excel macro automation and directly increasing ticket conversion by **30%**
- Conducted root cause analysis on customer feedback data to identify failure patterns across the value stream, driving a kaizen-style rapid improvement cycle that reduced repeat technical queries by **20%**
- Aggregated and combined data from multiple sources including sales records, partner transactions, and Google Analytics into a unified real-time KPI dashboard, improving attribution tracking accuracy by **15%** and presenting findings to leadership stakeholders

Helixer Healthcare Private Limited — Feb 2024 – May 2024
AI/ML Testing Engineer Intern — Hyderabad, India

- Automated preprocessing workflows for 9,000+ audio samples, reducing data preparation time by **30%** and standardizing inputs across model validation pipelines
- Executed misclassification and **root cause analyses** across multiple model architectures to assess risk and guide mitigation decisions, reducing false negatives by **20%**
- Coordinated **Alpha & Beta testing** cycles across cross-functional engineering and clinical teams, organizing validation documents and test reports to improve review efficiency by **20%** ahead of release milestones
- Tracked model defects via structured Jira logs and led iterative rapid improvement cycles across testing runs, enabling timely resolution and achieving a **15%** improvement in CNN model performance

Mercedes-Benz Research & Development — Jun 2023 – Aug 2023
AUTOSAR & Data Security Intern — Bangalore, India

- Strengthened ECU data security for in-vehicle platforms by integrating encryption protocols and digital signatures, mitigating unauthorized access risks across software integration cycles
- Applied fault injection techniques using Vector CANoe to validate error handling in embedded systems, improving system integration readiness by **5%** and supporting on-time delivery of quality milestones
- Coordinated with global engineering teams to align testing schedules, standardize quality protocols, and maintain delivery timelines during complex software integration cycles

PROJECTS

Collective Solutions – Event Management Application — Jan 2025 – Apr 2025
Northeastern University | MS Project, Agile/Scrum, Risk Management, CPM, RACI, Budgeting

- Led Agile project planning for a **30,000+** user platform by developing WBS, Gantt charts, RACI matrix, and cost estimates in MS Project to standardize delivery execution and stakeholder reporting
- Applied Critical Path Method and **dependency analysis** to identify and mitigate **5** schedule bottlenecks, enabling data-driven trade-off decisions and improving overall delivery confidence

Multi-Sensor Reliability Analysis for Autonomous Systems — Oct 2025 – Nov 2025
Northeastern University | Reliability Modeling, Sensitivity Analysis, System-Level Decision Making

- Modeled failure probabilities of LiDAR, camera, and radar sensors at **5,000** operating hours using **Weibull, Exponential, and Normal** distributions to evaluate 2-of-3 redundancy configurations for system-level design decisions
- Performed **sensitivity analysis** on hardware upgrades to achieve **21.45%** reliability improvement and identified diminishing returns to guide cost-effective investment prioritization
